

**Manual Aluminum models** for 1000 lb. fishing boats, to the largest – for 6000 lb. cruisers, you'll get years of convenient, dependable operation.

# MANUAL ALUMINUM

## FEATURES & BENEFITS

- 1 The ShoreStation Winch**  
 One of the most important features of these models is the time-tested ShoreStation winch. Virtually unchanged for over 40 years, it offers smoother lifting and dependability far superior to any ordinary winch.
- 2 Specially Designed Platform**  
 The "V" shape of the platform allows for operation in shallow water and provides easier centering. It is raised and lowered vertically to eliminate torque that would fatigue and weaken the lift. In the "up" position, there are no moving parts left in the water which minimizes corrosion.
- 3 Aluminum and Galvanized Steel Construction**  
 We've combined the lasting durability of aluminum with galvanized steel for added strength in critical areas. The result is a strong, lightweight lift that can be installed or removed by hand.
- 4 Motor Stop**  
 For an added measure of safety and perfect positioning time after time.
- 5 Four-corner Adjustability**  
 Keep the lift platform level while conforming to the contours of an uneven lake bed.
- 6 Aluminum Extrusions**  
 In addition to their superior environmental endurance, extrusions eliminate the need for aluminum welds while adding to the strength and stability of the lift.
- 7 Durable Component Parts**  
 From the stainless steel pin and brass bushings in platform pulleys to the stainless steel platform cables, everything is designed for years of dependable service.

**WHEEL LOCK MECHANISM**

*This spring-activated, safety feature prevents the platform from being raised too high.*

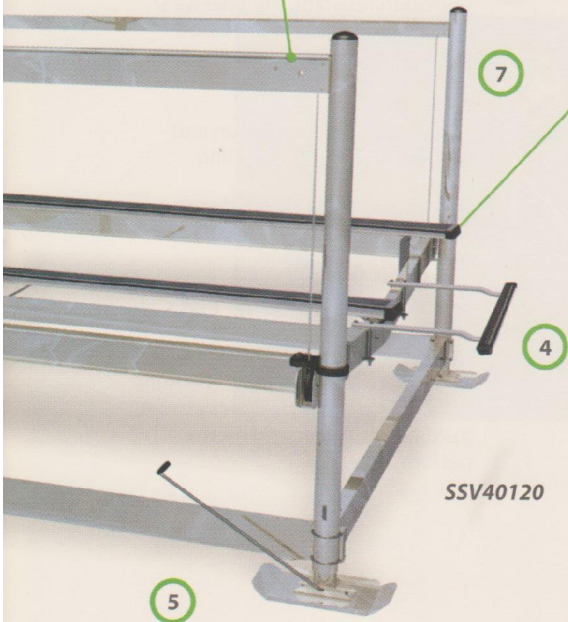

**SEALED ROLLER BEARINGS**

The winch tube pulleys on 1500 lb. to 4000 lb. capacity models feature sealed roller bearings for effortless lifting.

**NEW ULTRABUNKS**

The maintenance-free, hassle-free alternative to traditional wood bunks Ultra-durable... ultra-flexible... UltraBunks!
