

## **Boat Saver- Roller System**

# **Save your Boat and Dock**

### Worry-free Docking has never been this easy!

The Boat Saver Dock Roller System act as cushions, which when attached to your dock allows for worry-free docking. The Roller System utilizes the latest technology in plastics, which offers a durable solution against damage to the boat and the dock.

### How it works...

**Back Rollers-** Protects your boat and dock while backing into your slip.

**Corner Rollers-**Reduce damage of front-end impacts. The rollers are equipped with durable springs that cushion the boat and help to reduce damage to the dock.

***A GREAT way to Protect your boat and dock from the damaging effects of wind and waves!***

Wind and waves can cause the boat to bang into the slip sideways, specially designed rollers are used to help guide the boat during docking or while the boat is being stored in the slip.
