

The SunLift™ Difference

Marine-Grade Hydraulic Lifting System

Sunstream is the only hydraulic system designed for underwater use. This unique system has been creating using:

- Stainless Steel Hydraulic Rams
- Bronze Shaft Scrapers
- Water-Soluble, Environmentally Friendly SunFluid™ (Hydraulic Fluid)

Smart Electrical System

- The remote control has an automatic “sleep mode” so you don't need to turn the lift on and off every time you use your boat.
- A “low battery” indicator gives advance warning if the battery becomes low.
- A sealed, no-maintenance battery will eliminate the need to top the battery (Available upon request).
- Electronic surge protector prevents electrical surge damage.
- Water-tight connector plugs prevent corrosion failures in sensitive areas.
- 12 Watt solar panel provides 20% more power than other lifts.
- Waterproof transmitters are important safety features for marine use and swimming.

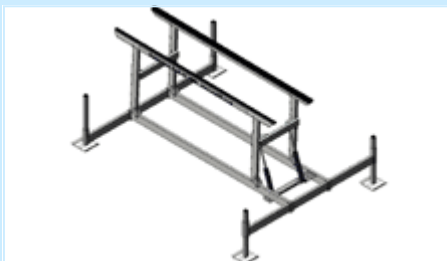

Superior Frame

- The sturdy, rust-proof frame is constructed with marine grade aluminum and stainless steel hardware.
- Automatic GravityLock™ secures the lift in the raised position.
- Rounded edges on frame improve handling and aesthetics.

SuperBunks™ Boat Supports

- Sunstream's patented SuperBunks™ are superior to carpeted lumber bunks that lack functionality, looks and durability. After many years of use, the SuperBunks™ rubber-capped aluminum design look great compared to carpeted, wooden bunks that can deteriorate, exposing bare wood to the hull of your boat.
- The spring-beam design distributes the load more evenly over the length of the bunk compared to wooden bunks that have load concentrations above the small support brackets. This spring-beam design helps prevent hull deformation.
- The rubber surface does not trap grit like carpet, which reduces scratching.
