

## Frequently-Asked Questions About

- Q)** How much weight is each ladder designed for?  
**A)** When mounted securely and properly to the dock/pier structure, the ladder will hold 500 lbs.

- Q)** What size are the steps?  
**A)** Each step is approximately 24.5" wide and 6" deep.
- Q)** How far does it drop into the water?  
**A)** There is approximately 11" between steps. Every dock is different, so we can't be exact due to water level and float sizes.

- Q)** How heavy are the WetSteps? Can I lift them out of the water?  
**A)** Since they are all aluminum

construction, they are very easy for young and old to lift out of the water. The 5-step ladder is 34 lbs, and is considerably lighter than steel and wooden ladders.

- Q)** Will my ladder stay looking new?  
**A)** Just like a pontoon boat, when aluminum is left in the water, it will discolor. You will see a water line unless you use a clear coat aluminum protectant prior to use. We offer the coating for an additional charge or pick a color and let us powdercoat it for you!

- Q)** Can it be taken out of the water for storage?  
**A)** Yes. Simply rotate it out of the water when not in use.

- Q)** Is it difficult to install?  
**A)** No, it requires only 8 bolts to be attached.

- Q)** Is there an easier way to mount the ladder to a cement tile dock?  
**A)** Yes. We now have a rubber coated, gray steel deck plate that replaces two cement tiles. It bolts directly in, so it only takes minutes to install both the ladder and plate.

**2' x 4' easy mounting plate**

**Mount your WetSteps in minutes.**

- Q)** Should I leave it in the water when not in use?  
**A)** No. It is recommended to remove it from the water when not in use to prevent algae, barnacles, etc. from growing. These types of build-up can make any step slippery, so take it out of the water to keep it clean.

- Q)** Does it rust?  
**A)** All metals oxidize; however, unlike other metals, aluminum performs extremely well in water. It is highly recommended to remove from water when not in use since freshwater can grow algae.

- Q)** Where are WetSteps made?  
**A)** Made in the USA -Lake of the Ozarks, Missouri. Shipping rates will vary from state to state, although there is no shipping charge for our Missouri retailers.

- Q)** Is there any kind of warranty?  
**A)** All Wet Steps dock products have a 10 year warranty on the construction.

- Q)** Will this work for pets?  
**A)** Larger dogs love it, but also check out our new K-9 Aqua Ramp for smaller and older dogs.

- Q)** Can I still pull a boat up alongside my dock?  
**A)** Yes. WetSteps easily lift completely out of the water to free up boat parking at a moment's notice.
